PERSONAL PROJECTS

Short Video Content Automation (SVCA) (04/2023 - 05/2023)

- The project aims to create engaging and human-like content by automating the entire process using AI.
- It involves extracting trending topics from various sources, generating video scripts using AI language models, selecting appropriate background images, and combining all these elements to produce high-quality videos.
- By leveraging AI capabilities, the project seeks to create content that closely resembles human-generated content, offering an immersive and engaging experience for the audience.

Enhancing Bank Security Against Physical Robberies (05/2023 - 05/2023)

- Our project utilizes computer vision and AI technology to detect and prevent robberies.
- We have developed a system that can accurately identify weapons in real-time using high-resolution surveillance cameras strategically placed throughout the bank premises.
- By leveraging advanced deep learning algorithms, our software analyzes the live video feed to swiftly detect the presence of weapons, including firearms, knives, and other potential threats.
- This real-time detection enables our system to promptly raise an alert and trigger an immediate response from the security team.
- With our innovative solution, banks can proactively enhance their security measures and create a safer environment for employees and customers, minimizing the risk of potential robberies and ensuring peace of mind for all stakeholders involved.

WORK EXPERIENCE

Reports Editor Shrinik Club

01/2023 - Present

Greater Noida

Shrinik Club is a vibrant college community that fosters innovation and collaboration among students

Achievements/Tasks

- Drafted comprehensive reports for various events, ensuring accurate documentation of their proceedings.
- Developed crowd management software, streamlining event operations and enhancing attendee experiences.
- Designed and created engaging presentations to effectively convey event highlights and key information.
